

Safety and health protection are our highest priority at Evonik. The safe transportation of goods is very important to us.

Cordstrap, the global leader in cargo protection, helped us to solve problems across a number of our sites. Rolling their solutions out to other locations will deliver improved safety and efficiency in our cargo securing.

Using Cordstrap solutions will deliver the following differences:

Increased efficiency

CornerLash® makes loads quicker to pack. One person can prepare and secure CornerLash® in 10 minutes: that's up to three times faster than other compliant solutions.

Full certification

CornerLash® is fully CTU Code compliant and AAR approved, meaning that your shipments won't be held up in transit due to failed inspections.

Complete consistency

CornerLash® performs day in, day out, whatever the weather: hot, cold, humid or dry. So cargo is always safe and stable, from your door to your customers'.

Driving sustainability

CornerLash® components are recyclable. You'll also notice considerably less material is wasted than in the past.

As a business with a focus on operating safely and also efficiently, a switch to improved cargo protection can help our company, our customers and the meeting of our Corporate Responsibility requirements. Our partner in cargo protection, Cordstrap can help us to do this.
